

Properly Removing PPE

After Applying Pesticides

Best Management Practices:

- Remove PPE immediately following task or when exposed to pesticides
- Store clean, dry PPE away from pesticides
- Wash regular work clothes as soon as possible to remove residues. Wash separately from other laundry
- Contaminated PPE must be disposed of according to the pesticide label

1. Wash disposable or reusable gloves with soap and water
2. While still wearing gloves, clean or dispose of remaining PPE
3. Wash gloves again, store or discard, then wash your hands
