

Step Up Your Safety

Help us work toward preventing workplace injuries, deaths and illnesses by raising awareness for National Safety Month. We are focused on reducing work related injuries that occur every day. Contact Environmental Health and Safety to help better serve your safety needs.

STEP 1

Planning

A proper Job Hazard Analysis (JHA) involves reviewing each task performed to determine where hazards exist.

STEP 2

Training

Employees that take EHS safety training courses make the workplace safer for everyone. EHS offers a variety of training courses to fit your needs.

STEP 3

Tools and Equipment

All tools & equipment must be properly maintained and inspected prior to use, to ensure that they are in a safe and usable condition.

STEP 4

PPE

Control methods such as engineering, administrative, and PPE can help protect employees from hazards. Ensure the proper control methods and/or PPE are selected.
